Your guide to with-profits

Important information about
investing in our with-profits fund
using one of our conventional
life assurance policies.

We have written this guide to give you more information about investing in our with-profits fund through one of our 'conventional' life assurance policies. These include the following types of policies:

- Endowment
- Endowment Plan 10
- Extra Cover Assurance
- Flying Start Endowment
- Full Endowment
- Versatile Endowment Plan
- Whole of Life Assurance.

The type of policy you have will be set out in the original documents that you were given when you took out your policy. Policies are often referred to as plans but for simplicity we will call them policies in this guide.

This guide explains how your with-profits life assurance policy works. You should read through all of this document as it contains important information about your policy, but here is a brief summary.

When you invest your money, it is pooled with the money invested by many other policyholders in part of our with-profits fund. What you get back from your policy depends on the fortunes of the with-profits fund, in particular how well the investments have done in the relevant part of the fund.

Your with-profits policy:

- **has guaranteed minimum values at the times explained later in this guide;**
- **may have bonuses added to these guaranteed minimum values; and**
- **will normally be cushioned from the daily ups and downs of the stockmarket (we call this 'smoothing').**

After meeting its obligations, the with-profits fund will over time be distributed in full to with-profits policyholders. Our aim is that different groups of policyholders receive their fair share of the fund.

This guide is a summary of a longer, more detailed, document called our Principles and Practices of Financial Management ('PPFM'). We have tried to make sure that this guide accurately reflects the PPFM. But the PPFM will apply if there is any difference between the information in it and the information in this guide.

The full PPFM is on our website at www.scottishwidows.co.uk/PPFM, or you can ask us to send you a copy. Our address is given at the end of this guide in the section "How can I get more information?" Also at the website are some 'Questions and Answers' that can help you check what sort of policy you have.

We've set out the information in this guide as answers to the following questions.

	Page
What is meant by with-profits?	3
What are the guarantees?	4
What types of bonus may be added to my policy?	5
How do you decide the bonuses?	5
What if I decide to cash in my policy on a date when guarantees don't apply?	7
What affects how much I might get back?	9
What are the risks of investing in the with-profits fund?	11
What is the capital support for the with-profits fund?	12
How can I get more information?	13

Most of the policies covered by this guide are 'endowment' policies, some of which will be associated with a mortgage. These policies will have a date, set at the start of the policy, on which you can receive a guaranteed cash sum. Some endowments (Versatile Endowment and Endowment Plan 10) also have any earlier 'option date' (see "What are the guarantees?" on page 4). The other policies covered by this guide are 'whole of life' policies and do not have such dates. However all policies will pay benefits if you die. To make it as easy to follow as possible, we have written most of the rest of this guide with endowment policies mainly in mind. If your policy is a whole of life policy, you should look out for the specific references to whole of life policies later on in this guide.

Although we refer in this guide to making payments if 'you' die, your policy may pay out in the event of someone else's death instead of yours. Your policy document will make this clear.

Throughout the guide we've assumed that you make all of the payments that are due while your with-profits investment continues. You may have stopped paying into your policy but not yet cashed it in. If so, your guaranteed cash sums will be lower than they originally were. However, we will add bonuses to your policy using the same rates of bonus that we use for other policies.

What is meant by with-profits?

We use the term 'with-profits' to mean a type of investment. It provides medium to long-term growth potential with some guarantees (see "What are the guarantees?" on page 4). By medium to long-term we mean investments that last at least 5 years.

Your money is pooled in our with-profits fund with the money invested by many other policyholders. Your investment will stay in the with-profits fund until one of the following happens:

- your policy matures, if you have an endowment policy;
- you cash in your policy;
- you die; or
- you change from with-profits by switching your investment to another investment fund (only a few policies allow this).

When you started to invest we gave you a guarantee that in certain circumstances we would pay you at least a minimum amount. A description of this guarantee and the circumstances when it applies is given in "What are the guarantees?" on page 4. We may increase your guaranteed amount by adding a regular bonus. We may also add a final bonus to your policy when it matures or if you die.

Further information on bonuses is given in "What types of bonus may be added to my policy?" on page 5. When guarantees do not apply, your cash-in value is worked out differently (see page 7).

Our approach to managing our with-profits fund can change from time to time. It's not exactly the same for all types of policy.

The with-profits fund

The with-profits fund invests in a mix of assets such as company shares, property, bonds and cash deposits. Bonds are a type of loan, usually to the Government or companies. You may have heard Government bonds referred to as gilts. The proportion of the with-profits fund that is put into each of these different types of asset will vary over time. The mix of assets can be different for different parts of the with-profits fund.

While shares and property have usually risen more in value than bonds and cash over long periods such as 20 years, the return has also been much more variable. One year the investment may do very well, but the next could see a big fall in value – this is often called 'investment risk'.

We may also use 'derivatives', which are specialist forms of investments. We apply strict controls over how we use derivatives and use them to reduce investment risk. For example, some derivatives give the with-profits fund the right to buy or sell assets at a fixed price at a future date.

Your group

When managing the with-profits fund we often look separately at different groups of policyholders. The group you'll be in will depend on the type of policy that you have and when you started it.

The shareholders

Scottish Widows plc is a 'proprietary company'. This means that we have shareholders. Our shareholders receive the charges that we make on policies like yours and in return meet the cost of looking after your policy. They also get a payment each year equal to one ninth of the value of the bonuses that we add to policies like yours. However this payment comes from a part of the with-profits fund specifically set up, when Scottish Widows demutualised in March 2000, to cover it. The payment does not affect what you get back from your policy.

What are the guarantees?

Your policy has some guarantees. When the guarantees apply your policy will have a minimum value. This is a minimum amount and we may pay out more than this.

Some endowment policies have **additional** benefits that are paid if you die. (These policies are likely to have been taken out in connection with a mortgage.) These additional benefits are not with-profits and are not covered by this guide.

The times when the guarantees apply and the size of the guaranteed minimum value depend on the type of policy you have. They are:

- when any endowment policy reaches the maturity date stated in the policy document;

- when some 20-year endowment policies are instead cashed in on the 10th anniversary of the policy's start date. This is called the 'option date' and applies to Versatile Endowment and Endowment 10 Plans. The guaranteed minimum amount is half the amount guaranteed for the maturity date, including half the regular bonus already added;
- or, for all policies, if you die.

The guarantees do not apply at other times.

What types of bonus may be added to my policy?

Three types of bonus may be added to your with-profits policy. They determine what you will be able to get back when guarantees apply. They are:

- regular bonus, sometimes called 'reversionary bonus', which may be added at the end of each year as permanent increases in the guarantees that apply to your with-profits policy;
- final bonus, sometimes called 'terminal bonus', which we may add on top of those guaranteed amounts; and
- interim bonus, a small amount of additional regular bonus which we may add alongside any final bonus.

We adjust levels of regular bonus once a year. We usually adjust levels of interim bonus once a year as well, and rates of final bonus twice a year, but we may sometimes change them at other times. Future rates of bonus are not guaranteed.

Different groups of policies and policies that started in different periods (usually different years) will have different levels of final bonus. When we pay out on death, we would use the same rates of final bonus as we use for endowment policies that started at the same time and are reaching their maturity dates.

The yearly statement we send you includes information about the current rates of regular bonus for your group.

How do you decide the bonuses?

Regular, interim and final bonuses have different purposes, and we decide them differently.

Regular bonus

The size of the regular bonus depends mainly on what bonuses we have already added to policies, past investment performance and what we expect in the future.

When setting a rate of regular bonus we consider all the policies that receive that bonus and not each policy by itself.

We aim to set the regular bonus rate so that there is scope in the future for final bonuses if the relevant assets of the fund provide steady growth.

We may set rates at a lower level than this when it is necessary to limit losses to the with-profits fund.

We expect higher-risk assets to give a better, but less predictable, return over the long term. If we were to set rates of regular bonus at higher levels, we'd have to invest more of the with-profits fund in more predictable lower-risk assets (see "Investment performance" on page 10). We would then expect to have less to pay out to policyholders.

We may raise or lower rates of regular bonus in several stages. There could be no regular bonus in some years.

Interim bonus

Interim bonus rates are set at levels similar to the levels of regular bonus we expect to set at the end of the coming year.

Final bonus

We choose 'sample policies' to be representative of the policies in your group. Different sample policies represent policies that started in different periods (usually different years). We set a 'target payout level' for each sample policy. If we are using more than one sample policy for any year, we use an average of the results from the individual sample policies.

We then compare this target level with the corresponding guaranteed amount and pay a final bonus if the target level is bigger. In other words, we aim to 'top up' what policyholders get to reflect the sample policies' target levels.

To help us to work out the target levels we:

- take the 'asset share' of the sample policies (see "Asset shares" on page 9);
- increase it so the final bonus includes the investment returns we expect to earn between when we set the final bonus and when policy payments are made;
- make the adjustment for the smoothing of recent investment returns described overleaf, which gives us a 'smoothed asset share'; and
- make a small reduction towards the cost of the extra amounts we expect to pay from time to time because of guarantees.

We may add a further small amount to the final bonus which results from our demutualisation. The current level of this amount can be located on the with-profits section of our website.

Most of this section is written for policies which have a maturity date – that is, for endowment policies. If your policy is a whole of life policy, it does not have a maturity date. This means that we can't set all of the final bonuses for them in the way we've described. However, when setting final bonuses for them we keep to the same basic ideas, including using asset shares, as far as appropriate and possible.

Overall, we aim that total payouts over many years are at least equal to the asset shares.

Smoothing

With-profits investing includes a special feature called 'smoothing'. The stockmarket goes up and down daily and can move a lot in a short space of time. We aim to smooth out some of the effects of these short-term peaks and troughs. We only consider movements in the last two years. So smoothing will not lessen the effects on your return of longer-term changes in the stockmarket.

Smoothing is complex and more details of our approach are in our PPFM.

We constantly monitor investment conditions, and may change levels of final bonus at any time. For instance, we'd consider a change if asset shares move more than 15% away from the smoothed asset shares we had used for the current bonus rates. We'd also consider a change if it was necessary to limit losses to the with-profits fund. We may limit the smoothing when setting final bonus rates to reduce the likelihood of a further final bonus change within the following six months.

Final bonuses can sometimes change very significantly, even within a few months, in spite of smoothing.

What if I decide to cash in my policy on a date when guarantees don't apply?

You can choose to make a change that results in your investment leaving the with-profits fund when guarantees don't apply. This may happen because you decide:

- for an endowment policy, to cash it in before it matures, on a date that is not an option date;
- for a whole of life policy, to cash it in before you die; or
- for the few policies that allow it, to switch out of with-profits into another investment fund.

Whatever the reason, we will still aim to give you fair value for your investment. However, there is no minimum guarantee of what your policy will pay and you will not get anything for the guarantees you are giving up.

Our approach is as follows, although a couple of exceptions are explained at the end of this section.

We look at sample policies that are of a similar type to yours. They have similar starting dates and periods still to go to the maturity date.

We set target levels in much the same way as when guarantees apply (see “Final bonus” on page 6) but there are two differences:

1. The smoothing we use is different. The most important difference is that we only consider stockmarket movements over the last six months. This means that there would be a much quicker fall or rise in the amount that you could get back if there is a large fall or rise in the value of your group’s part of the fund.
2. We adjust the target levels so that:
 - the closer a policy is to its maturity date the closer the target level is to the target level for a maturing policy; and
 - the target level is reduced for policies that are further from their maturity date. The reduction is typically 5%.

Further details of these differences are set out in our PPFM.

We may add a further small amount which results from our demutualisation. The current level of this amount can be located on the with-profits section of our website.

Our aim is to maintain a fair level of payouts to everyone investing in the with-profits fund. We usually adjust target levels every six months. However, we constantly monitor investment conditions and may change them at any time. This would change what you would get. For instance, we’d consider a change if asset shares differed by more than 5% from the smoothed asset shares that were used to set current policy values. We’d also consider a change if it was necessary to avoid excessive profits or losses to the with-profits fund.

For some types of policy we need to use different approaches, but we keep the differences as small as we reasonably can. The most important examples of these policies are:

- the 20-year endowment policies with option dates 10 years after they were started (see “What are the guarantees?” on page 4); and
- whole of life policies, which don’t have maturity dates.

What affects how much I might get back?

Asset shares

Asset shares help us decide the bonuses and the levels of cash-in values when guarantees don't apply. The way this works is described earlier in this guide.

Very broadly, asset shares are an accumulation of the amounts invested. So when deciding what an asset share would be, we look at the following four main factors:

- the amounts invested in sample with-profits policies (see below);
- when they were invested;
- the past investment performance of the 'relevant assets' (see "Investment performance" overleaf); and
- the cost of providing death benefits (the cost of paying guaranteed benefits on the death of policyholders is shared amongst the asset shares of the remaining policies);

The cost of providing death benefits is a much less important factor for most endowments than for whole of life contracts.

We also make adjustments for:

- the charges we have made to cover the cost of managing your policy;
- taxation;
- a regular 'capital fee' (a 0.3% a year deduction from the asset share); and
- any profits and losses from 'business risks' that affect asset shares (see below).

The capital fees are added to a special account kept separate in the with-profits fund called the 'Additional Account'. Most profits and losses from business risks, other than those from providing death benefits, don't affect asset shares for your type of policy. Instead, they are added to or taken from the Additional Account. More information on business risks and the Additional Account is given in "What are the risks of investing in the with-profits fund?" on page 11.

We track asset shares of the with-profits fund for sample with-profits policies. We track them separately for the different groups of policyholders, including your group. We track them for policies that were started at different times and that have different periods to run.

Investment performance

This guide sometimes refers to ‘relevant assets’. These make up the part of the with-profits fund whose investment performance has an important effect on asset shares and therefore on what you will get back. The performance will depend on, among other things, how much of the relevant assets are made up of each of the different types of asset. The mix of the relevant assets can be different for different groups of investors.

We hold part of the relevant assets for your group in higher-risk assets such as shares and property, to try to achieve higher returns. The rest is in lower-risk assets, such as fixed-interest bonds issued by the Government or by companies, and cash deposits that earn interest.

The performance of different types of asset varies considerably over time. So we may change the mix of the assets with the aim of:

- getting the best possible long-term performance; and
- making sure that the with-profits fund can always meet its guarantees.

When doing so we allow for support from some of our assets outside the with-profits fund, following guidelines set at the time of the demutualisation. This means we can invest more of the relevant assets in shares and property. (See also “What is the capital support for the with-profits fund?” on page 12.)

We include information about the mix of assets within the PPFM section of the Scottish Widows website. You’ll therefore be able to see how we review and change the mix of the assets over time.

What are the risks of investing in the with-profits fund?

Your with-profits investment, by being part of our with-profits fund, is exposed to 'investment risk'. This is the risk that the value of the relevant assets of your group can fall as well as rise. It is possible you could get back less than you invested. There are other risks known as 'business risks'.

Any profits or losses arising from the business risks, other than the cost of providing death benefits, would normally not affect the asset shares of policies like yours. Instead they would be paid into or taken from the separate part of the with-profits fund known as the Additional Account. This Additional Account was set up when we demutualised on 3 March 2000 to cover such things. Anything left over in it would be paid out as extra final bonus to the remaining policies that were started on or before 3 March 2000. If the Additional Account is not sufficient to cover losses arising from business risk, any later losses would be met firstly from assets outside the with-profits fund. However in extreme cases some losses could be shared among all the with-profits policies that were started before we demutualised.

The main business risks to the Additional Account come from the guarantees and smoothing of the payments that we make to other with-profits investors.

When we apply smoothing and guarantees, we increase what we pay some policies. This leaves less in the with-profits fund for the other policies. On the other hand, when we pay some policies less because of smoothing it leaves more for the other policies.

The Additional Account is also exposed to smaller business risks including the following:

- the with-profits fund's profits and losses from the non-profit policies that were transferred into it in March 2000, when we demutualised or which are set up when with-profits pension policies are converted to non-profit pension annuities at retirement; and
- the cost of compensation paid to the holders of policies sold by Scottish Widows before demutualisation, if any are shown to have been mis-sold.

The policies covered by this guide are unlikely to share in the profits and losses from policies that were started after we demutualised in March 2000, and vice versa.

There are naturally risks associated with your policy that apply to other sorts of investment and not just to with-profits policies. For instance, your policy might not pay out as much as you had hoped.

This guide deals only with risks that are directly associated with your policy being invested in our with-profits fund.

What is the capital support for the with-profits fund?

We aim to hold enough assets in the with-profits fund to provide a fair level of payouts to the current investors in the fund. While we could hold some extra assets as 'working capital' in the fund, most of the working capital will be held elsewhere in the company.

Working capital provides support for the with-profits fund as and when it's needed. The support helps us to maintain the mix of assets that we describe in "Investment performance" on page 10. It also helps us to meet our aim of maintaining a fair payout to everyone investing in the with-profits fund.

For more on how all this works, see our PPFM.

How can I get more information?

If you're still not sure about your with-profits investment, you should speak to your financial adviser or contact us direct. If you wish to contact us you can write to us at:

Scottish Widows
PO Box 902
15 Dalkeith Road
Edinburgh
EH16 5BU

Or you can call us on 0845 845 0845. We're open from 8am to 6pm Monday to Friday and from 9am to 12.30pm on Saturday. We may record and monitor calls to help us improve our service.

We'll write to you if we make a change to our approach to managing our with-profits fund that might have a significant effect on your plan. We'll also write if we change any of the 'Principles' in our PPFM. We'll normally include a replacement guide.

If you've any other with-profits investments with us that aren't covered by this guide, we'll send out your guide or guides for them.

SCOTTISH WIDOWS
preparation is everything
